> STAGE 1: THE PROBLEM_

1P: LINGUISTIC SILOS

Citizens complain in Tamil, Hindi, Portuguese. Data rots.

2P: GUT-FEELING SPEND

Decisions rely on intuition, not infrastructure gap metrics.

3P: PENALIZING NEGLECT

Missing paperwork = zero score. Neglected regions fall silently.

4P: NO ACCOUNTABILITY

No formula. No audit trail. No way to explain the final score.

> STAGE 2: THE SOLUTION_

A: DEMAND -> SCORES

Text/voice/bulk imports
processed in Tamil, Hindi,
Portuguese to build priority
scores.

B: OPEN FORMULA

$S = 100 * [w * D + (1 - w) * G]$.
Transparent math. Change
weight, watch rankings flip.

C: EVIDENCE BLOCKING

No investment plan? Region is
BLOCKED, not scored zero.
Exposes missing data.

> AI & EXPLAINABILITY_

CATEGORY EXTRACTION

Gemini extracts category + Unicode evidence spans.

Fallback: keyword matcher (labeled 'local-fallback').

RATIONALE GENERATION

Gemini writes evidence-grounded explanation.

Fails -> deterministic template takes over.

> GOVERNANCE & AUDIT_

ROLE-BASED ACCESS:

- + Planners: endorse, score
- + Auditors: sensitivity, memos
- + Citizens: submit, view

STAGED REVIEW:

- + DRAFT -> human confirm -> counted
- + Plan gets revision number
- + Stale revision -> 409 Conflict

SECURITY LOG:

SHA-256 evidence hashing * Cryptographic reviewer attribution
Immutable audit snapshots

STAGE CLEAR

Because priorities should come from evidence, not guesswork.
